

THE NATIONAL ACADEMY OF SCIENCES OF BELARUS

Enzymatic feed supplement

Compliferm

promoting digestibility
and saving expense of fodder,
upgrading nutritive value of rations,
raising farm stock productivity

Efficiency of action

Compliferm inclusion into calf rations accelerates metabolic processes, increases average daily weight gains by **10.5%** at **5.8%** reduced fodder input

Application guidelines

The product is admixed to the rations of sucking calves in the ratio **135 ml per 1 ton**

Ecological benefits

There are no limitations in slaughtering period and meat consumption upon Compliferm feeding

Active ingredients

Ultraconcentrated cultural liquid of *Trichoderma viride* and fungal cellulolytic enzymes

Preparative form

Homogeneous liquid

Terms of storage

Half a year at temperature 0 до +10°C in commercial package at warehouse in place protected from solar exposure and precipitation

Developed

Institute of Microbiology of NAS of Belarus,
Vitebsk State Academy of Veterinary Medicine

Specifications BY 100289066.125-2014
State registration № 20-1083-260118

Manufactured: Institute of Microbiology of NAS of Belarus
